

High Molecular Weight DNA using

Bio-Nobile kits and tools for Nucleic Acid separation

The gentle PickPen method is the choice when the sample material or down stream process are demanding.

The PFE picture illustrates the quality of DNA purified using the MagRo 8-M Workstation and QuickPick kits (lines 3 & 4) compared to an alternative kit (lines 1 & 2).

PickPen technology:

- works with magnetic particles
- moves particles not liquids
- provides simple protocols
- solid phase RT-PCR speeds up gene expression work
